Abstract (quoted verbatim from the publication)

We present an on-line algorithm for constructing suffix trees that operates in linear time. The algorithm reads text symbols sequentially and updates active suffix pointers, enabling rapid whole-genome pattern matching.

Abstract quoted from E. Ukkonen et al., Algorithmica (1995).

Notes: record the page or section for every claim you make about this paper.

Reading prompts

1. What is the core problem addressed and what assumptions are made?
2. What mathematical or structural abstractions represent the physical phenomena?
3. How can this concept be mapped or transferred to analogous problems in other domains?

This card is a workshop wrapper prepared by the organisers. Only the abstract is quoted from the publication; read the paper itself through the link above before asserting any relationship.
