Domain DOM_PHYS

Abstract (quoted verbatim from the publication)

We present the mobility analogy mapping force to current and velocity to voltage. This topological correspondence allows mechanical networks to be solved with standard circuit loop and nodal theorems.

Abstract quoted from F. A. Firestone et al., Journal of Applied Physics (1938).

Notes: record the page or section for every claim you make about this paper.

Reading prompts

1. What is the core problem addressed and what assumptions are made?
2. What mathematical or structural abstractions represent the physical phenomena?
3. How can this concept be mapped or transferred to analogous problems in other domains?

This card is a workshop wrapper prepared by the organisers. Only the abstract is quoted from the publication; read the paper itself through the link above before asserting any relationship.
