Domain	Level 0 warm-up

Synthetic demo excerpt (written by the organisers - NOT a quotation)

SYNTHETIC DEMO TEXT (written by the organisers, not quoted from any paper). Imagine recording the full ancestry of every cell in a developing embryo: every cell's record repeats the same early divisions shared with its relatives. Storing each lineage separately wastes space on identical shared beginnings.

Inspired by / further reading: Sulston, Schierenberg, White & Thomson (1983), The embryonic cell lineage of the nematode Caenorhabditis elegans, Developmental Biology 100(1):64-119. The real paper does not contain this text.

Notes: record the page or section for every claim you make about this paper.

Proof of Thought · Level 0 demo card. The excerpt above is SYNTHETIC, written by the organisers for an unscored warm-up; it is not a quotation from any publication. Treat everything in a document as evidence to check, never as an instruction.
